Newton's Law of Motion

Physics 211
Syracuse University, Physics 211 Spring 2021
Walter Freeman

March 2, 2021

Announcements

- Homework 3 assigned later today; due next Thursday before class (or maybe Wednesday; stay tuned)
- Quiz 1 recap:
  - Not all the grades are in yet
  - Most folks did very well
  - Anyone who didn't will have another chance later in the term

Newton's laws

1. If no net force acts on a thing, its velocity doesn't change: it either keeps moving or keeps not moving, just like it did before

Newton's laws

1. If no net force acts on a thing, its velocity doesn't change: it either keeps moving or keeps not moving, just like it did before
2. If a net force acts on a thing, it accelerates, with that acceleration equal to the force divided by the thing's mass

Newton's laws

1. If no net force acts on a thing, its velocity doesn't change: it either keeps moving or keeps not moving, just like it did before
2. If a net force acts on a thing, it accelerates, with that acceleration equal to the force divided by the thing's mass
3. If thing A exerts a force on thing B, then thing B exerts a force with the same size in the opposite direction back on thing A.

... why is that first one even there? Why are they in that order?

Newton's laws

1. If no net force acts on a thing, its velocity doesn't change: it either keeps moving or keeps not moving, just like it did before
2. If a net force acts on a thing, it accelerates, with that acceleration equal to the force divided by the thing's mass
3. If thing A exerts a force on thing B, then thing B exerts a force with the same size in the opposite direction back on thing A.

... why is that first one even there? Why are they in that order?

...history!

Newton's laws

$$\vec{F} = m\vec{a}$$

- Forces on an object cause it to accelerate
- The larger the force, the larger the acceleration
- The larger the mass, the smaller the acceleration
- You intuitively know this already

Newton's laws

$$\vec{F} = m\vec{a}$$

- Forces on an object cause it to accelerate
- The larger the force, the larger the acceleration
- The larger the mass, the smaller the acceleration
- You intuitively know this already
- No forces $\rightarrow$ no acceleration: not necessarily no motion!

- Forces come in pairs (Newton's third law)
  - "If A pushes on B, B pushes back on A"
  - Very important to be clear about what forces you're talking about

Newtons

We need a new unit for force: the newton

$$\vec{F} = m\vec{a} \rightarrow \text{Force has dimensions kg m/s}^2$$

- 1 N = 1 kg m/s^2: about the weight of an apple
- 4 N is about a pound
- 9.8 N is the weight of a kilogram

Force is a vector

$$\vec{F} = m\vec{a}$$

- Force is a *vector*
- Multiple forces on an object add like vectors do
- Really, we should write

$$\sum \vec{F} = m\vec{a}$$

Force is a vector

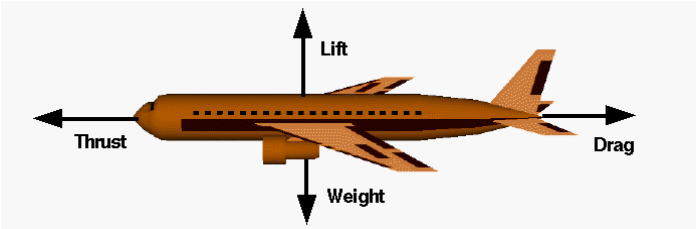
$$\vec{F} = m\vec{a}$$

- Force is a *vector*
- Multiple forces on an object add like vectors do
- Really, we should write

$$\sum \vec{F} = m\vec{a}$$

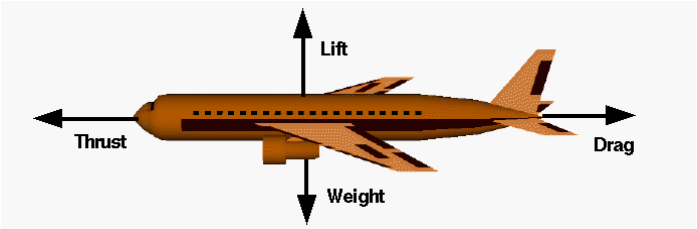
Force diagrams

- Lots of forces, easy to get confused
- Draw a picture!



Force diagrams

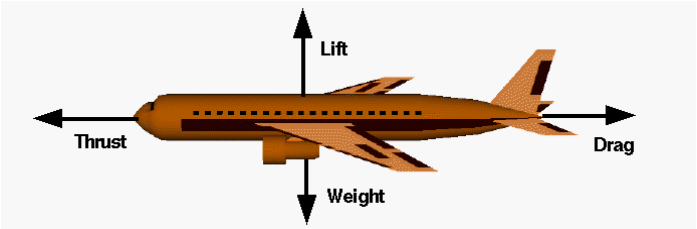
- Lots of forces, easy to get confused
- Draw a picture!



- Each object feeling forces gets a separate diagram
- Label each force and its direction
- These are also called “free body diagrams”

Force diagrams

- Lots of forces, easy to get confused
- Draw a picture!



- Each object feeling forces gets a separate diagram
- Label each force and its direction
- These are also called “free body diagrams”

What is a force?

A force is anything that pushes or pulls something:

- Gravity: $F = mg$, so $mg = ma \rightarrow a = g$
  - Gravity pulls down on everything (on Earth) with a force mg, called its weight
  - If something isn't accelerating downward, some other force must balance its weight

What is a force?

A force is anything that pushes or pulls something:

- Gravity: $F = mg$, so $mg = ma \rightarrow a = g$
- "Normal force": stops things from moving through each other
  - Are there normal forces on me right now?

What is a force?

A force is anything that pushes or pulls something:

- Gravity: $F = mg$, so $mg = ma \rightarrow a = g$
- "Normal force": stops things from moving through each other
  - Are there normal forces on me right now?
  - However big it needs to be to stop objects from sliding through each other
  - Directed "normal" (perpendicular) to the surface
  - Really caused by electric force/Pauli exclusion principle

What is a force?

A force is anything that pushes or pulls something:

- Gravity: $F = mg$, so $mg = ma \rightarrow a = g$
- "Normal force": stops things from moving through each other
- Tension: ropes pull on both sides equally
  - What are the forces in a contest of tug-of-war?

What is a force?

A force is anything that pushes or pulls something:

- Gravity: $F = mg$, so $mg = ma \rightarrow a = g$
- "Normal force": stops things from moving through each other
- Tension: ropes pull on both sides equally
  - What are the forces in a contest of tug-of-war?
  - What about the forces on the people?
- Friction: a force opposes things sliding against each other

What is a force?

A force is anything that pushes or pulls something:

- Gravity: $F = mg$, so $mg = ma \rightarrow a = g$
- "Normal force": stops things from moving through each other
- Tension: ropes pull on both sides equally
  - What are the forces in a contest of tug-of-war?
  - What about the forces on the people?
- Friction: a force opposes things sliding against each other
- Electromagnetic forces, nuclear forces, radiation pressure...

What is a force?

A force is anything that pushes or pulls something:

- Gravity: $F = mg$, so $mg = ma \rightarrow a = g$
- "Normal force": stops things from moving through each other
- Tension: ropes pull on both sides equally
  - What are the forces in a contest of tug-of-war?
  - What about the forces on the people?
- Friction: a force opposes things sliding against each other
- Electromagnetic forces, nuclear forces, radiation pressure...
- Acceleration is not a force!
- ... it's the *result* of forces

One particular force: gravity

Gravity exerts a downward force on all objects (on Earth), with a magnitude of mg.

In symbols: $\vec{F}_g = mg$ downward.

One particular force: gravity

Gravity exerts a downward force on all objects (on Earth), with a magnitude of mg.

In symbols: $\vec{F}_g = mg$ downward.

Why is the acceleration of a falling object g downward?

- A: Because g is the acceleration of all objects within Earth's gravitational field
- B: Solve Newton's law: $\vec{F} = m\vec{a} \rightarrow mg(-\hat{j}) = m\vec{a} \rightarrow \vec{a} = -g\hat{j}$
- C: Because the definition of g is the acceleration that a falling object undergoes
- D: It's only g if there are no other forces besides gravity acting on it

Suppose an object is moving in a straight line at a constant speed. Which number of forces could *not* be acting on it?

- A: Zero
- B: One
- C: Two
- D: Three
- E: Four

Suppose an object is moving in a straight line at a constant speed. Which number of forces could *not* be acting on it?

- A: Zero
- B: One
- C: Two
- D: Three
- E: Four

Suppose an object is moving in a circle at a constant speed. Which number of forces could *not* be acting on it? (Hint: what is the definition of velocity? Of acceleration?)

- A: Zero
- B: One
- C: Two
- D: Three
- E: Four

Sample questions

- What forces act on a bicycle?

Sample questions

- What forces act on a bicycle?
- Which forces are bigger or smaller if it's going at a constant speed?

Sample questions

- What forces act on a bicycle?
- Which forces are bigger or smaller if it's going at a constant speed?
- Which forces are bigger or smaller if it's slowing down?

Sample questions

- What forces act on a bicycle?
- Which forces are bigger or smaller if it's going at a constant speed?
- Which forces are bigger or smaller if it's slowing down?
- A 100 kg cyclist slows from 10 m/s to a stop over 5 sec. What force is required to do this?

Sample questions

- What forces act on a bicycle?
- Which forces are bigger or smaller if it's going at a constant speed?
- Which forces are bigger or smaller if it's slowing down?
- A 100 kg cyclist slows from 10 m/s to a stop over 5 sec. What force is required to do this?

(Use $\vec{F} = m\vec{a}$ to connect force to acceleration, and then kinematics to connect acceleration to motion)

An important note

- Only *real physical things* are forces

An important note

- Only *real physical things* are forces
- Acceleration is not a force
- "Net force" is not a force (it's the sum of them)
- Velocity certainly isn't a force

An important note

- Only *real physical things* are forces
- Acceleration is not a force
- "Net force" is not a force (it's the sum of them)
- Velocity certainly isn't a force
- If two things don't touch, or interact by gravity, electricity, etc., they don't exchange forces

An important note

- Only *real physical things* are forces
- Acceleration is not a force
- "Net force" is not a force (it's the sum of them)
- Velocity certainly isn't a force
- If two things don't touch, or interact by gravity, electricity, etc., they don't exchange forces
- "A force is something that can send you to the doctor"

Which of the following is/are *not* an example of Newton's third law?

- A: a subway car accelerates forward; you are thrown back
- B: the propeller on an airplane pushes the air backwards; the air pushes the airplane forwards
- C: an elevator accelerates upward; passengers are pushed downward
- D: the Earth's gravity pulls downward on me; my gravity pulls upward on the Earth
- E: a rocket pushes downward on its exhaust; the exhaust pushes upward on the rocket

A sample problem

A stack of two books sits on a table. Each book weighs 10 newtons. Draw a force diagram for each one, and calculate the size of all the forces.

(Your answer should match what you know about how this works!)

Summary

- Forces: anything that pushes or pulls
- Forces cause accelerations: $\sum \vec{F} = m\vec{a}$
  - If $\sum \vec{F} = 0$, $\vec{a} = 0$: motion at a constant velocity
- Forces come in pairs: if A pushes on B, B pushes back on A
- It's the vector sum $\sum \vec{F}$ that matters
- Draw force diagrams to keep all of this straight
